

Jio DLT — Organization Overview

Step 1 of 4 · trueconnect.jio.com · Principal Entity registration for SMS OTP

Before you start

- 1. PAN card scan
- 2. GST certificate **or** your incorporation / registration document

Each file under 5 MB. Formats: jpg, jpeg, png, pdf.

Field by field

Field	What to enter
Organization Name	Legal name exactly as printed on the PAN card . Not “KrushiSarva”, not “CropSetu” — the registered entity name. Jio name-matches against the PAN and rejects mismatches.
Organization Category	Non Government
Organization Type	Match your actual registration: Private Limited Company / LLP / Partnership / Proprietorship. Don’t pick Pvt Ltd unless you have a CIN.
PAN/TAN	Your PAN — format <code>ABCDE1234A</code> . Use PAN, not TAN. For a proprietorship this is your personal PAN.
Upload PAN/TAN	Clear scan of the PAN card
GST as KYC toggle	ON if you have a GSTIN — see below
GST Number + Verify	15-digit GSTIN. Hit Verify before Next.
Upload GST	GST registration certificate

The GST toggle

ON collapses the form to GST number + upload, gives one-click verification (faster approval), and lets you claim GST input credit on the registration fee. Turn it **OFF** only if you have no active GSTIN — then pick the KYC document matching your Organization Type:

Your org type	KYC Document Type	Number to enter
Private Limited Company	Certificate of Incorporation/Registration	CIN
LLP	Certificate of Incorporation/Registration	LLPIN
Partnership	Partnership Deed	Deed registration no.
Proprietorship	Shops & Establishment certificate <i>or</i> Trade License	Certificate / license no.

A proprietorship has no Certificate of Incorporation. Don't select it hoping it passes.

Three things that will bite you

1. **Organization Name is load-bearing.** It's what your 6-character sender ID gets judged against at the header stage. If the PAN name has no connection to "KrushiSarva" or "CropSetu", you'll need a trademark, domain registration, or Play Store listing as separate proof there.
2. **Verify the GSTIN before hitting Next.** The button isn't decorative — an unverified GSTIN fails silently later.
3. **Photos of documents work**, but glare or a cropped edge is a common rejection reason. Use a scan, or a flat, fully-in-frame photo.
